

b-smart Software as a Service Data Sheet

The Situation

Businesses want solutions that will improve organizational performance to generate competitive advantage. These need to be implemented as quickly as possible with minimum impact on day to day operations.

The Problem

For customer focused organizations the need to retain market share and revenues in the face of ongoing resource constraints is a major challenge. Internal systems can take too long to implement, resulting in missed opportunities or worse a loss of market share.

The Implication

This conflict in priorities can defer opportunities to improve performance to gain competitive advantage.

The Solution

b-smart Software as a Service project management solution helps to overcome these problems by eliminating the need to:

- Purchase and install hardware
- Install software
- Provide post implementation support

Getting b-smart up and running is as simple as clicking on a URL in your browser.

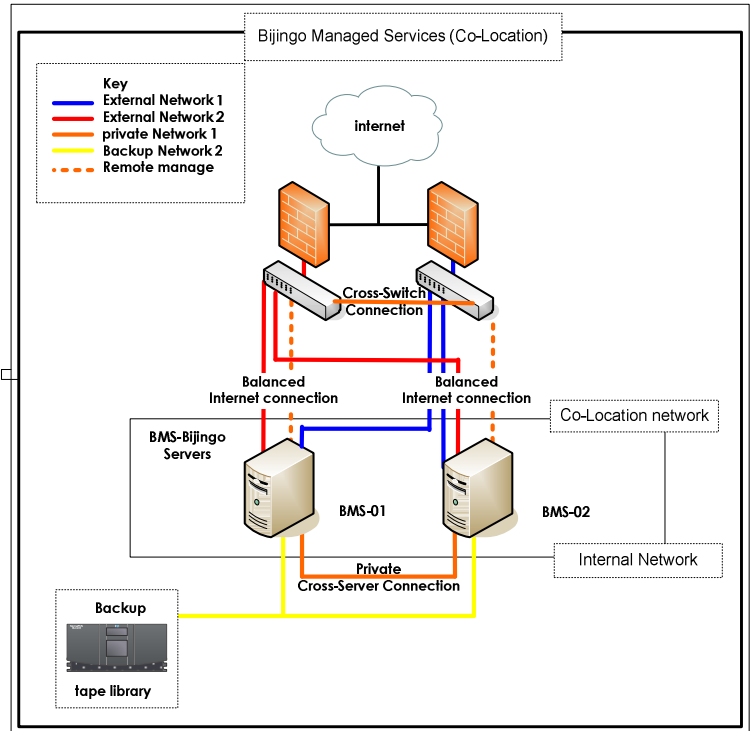

The Pay off

You realize these benefits:

- Outlay zero capital
- Implement in days rather than weeks
- Eliminate in house support
- Access to the latest version of b-smart
- Outsource service delivery risk

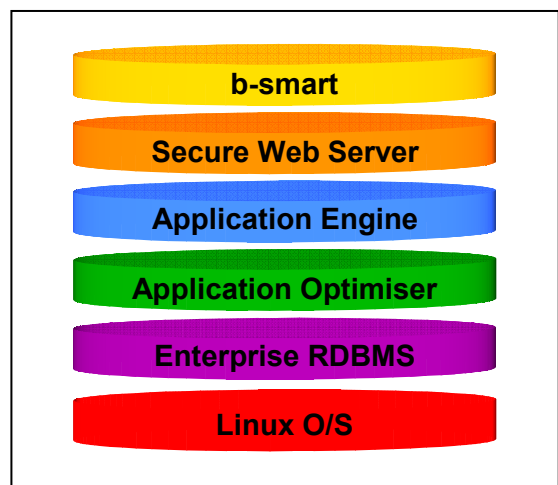

The Technology Platform

Dell is the preferred server provider for the b-smart solution. The technology platform has been designed for high availability with no single point of failure for the servers, storage, network, firewalls and internet connections. Multiple firewalls have been set up between the outside world and your data.

The Software Architecture

The software architecture makes use of “best of breed” operating systems, relational database and middleware. Their proven ability to inter work provides the secure, robust, high performance environment necessary to support b-smart. Each of the application layers is certified to work with the other elements of the software architecture. All data is encrypted before being stored in the database for added security.

b-smart - your projects

Our Partners

Bijingo has selected the following partners to support the operation of b-smart hosted Software as a Service:

- GlobalCentre - co location in a secure data centre , hardware monitoring and media rotation services
- Recall Australia - offsite backup media management

These agreements will ensure that service levels are met and client data is secure.

About GlobalCentre:

GlobalCentre which is located in Melbourne at 190 City Road South Melbourne. GlobalCentre is owned by Datacom which is one of the worlds largest data centre providers.
