

# b-smart Product Data Sheet

## What is b-smart?

b-smart is an easy to use collaborative tool for managing all work within an organization, business unit or department. b-smart allows tasks to be gathered together into projects to enable better management of work.

It provides a centralized repository for information with functionality to manage tasks, issues, risks and change requests, financial and human resources, time recording and organizational processes for projects or repeatable work flows.

bSmart tracks progress, provides forecasts, and management reporting of projects and resources in an organization. It enables good project management practice and integrates with mainstream planning tools such as Microsoft Project. Importantly b-smart also provides full audit compliance capability.

## What problems does b-smart solve?

b-smart solves these common project management problems:

- Reporting simply, easily and accurately for single and multiple projects
- Managing resources within or across multiple projects
- Managing multiple projects
- Central management of issues, risks and change requests for a project or a portfolio of projects
- Tracking of work, time and status
- A single source of information for all projects

## Who uses b-smart?

Organizations who need to manage more proactively.. b-smart facilitates comprehensive management of projects, as well as discrete tasks whether they are “business as usual” processes, standard support tasks or ad-hoc activities. It enables staff to record effort expended, status, issues affecting completion, scope changes and risks for allocated activities while providing visibility for effective management.

b-smart is suitable for small, medium and large organizations. For a business that runs a large portfolio of projects with a mix of dedicated and part time staff, it enables efficient and effective management

and reporting of resources and project status. For organizations that run projects where staff juggle “business as usual” activities with project specific tasks, b-smart provides functionality to manage these competing demands.

## What functionality is available?

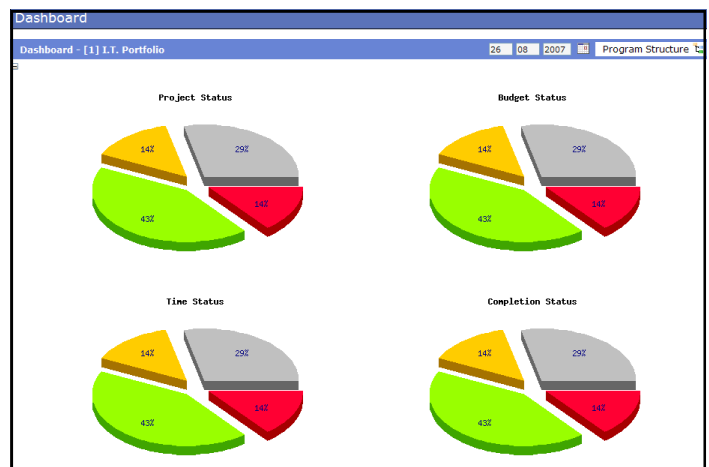

**Home** gives a user a personalized view of tasks, projects, issues, to-do’s and service requests.

**Timesheets** provides the user with a current list of tasks enabling them to update status and record effort on the project in real time.

**Project Centre** enables the management of and access to project, program and portfolio related information.

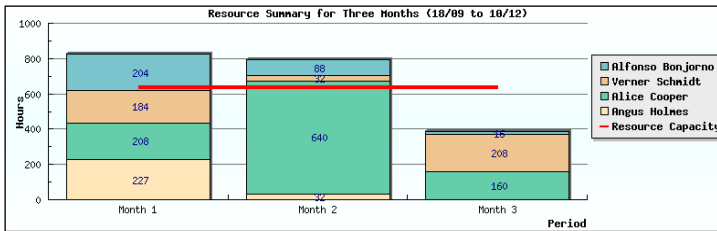

**I.R.C. Centre** provides the functionality to capture, manage and report on the status of issues, risks and changes, service and client requests related to projects and organizations.

**Report Centre** uses a fully customizable reporting wizard to generate the reports you want for individual projects, programs and portfolios and associated resources, issues, risks, change and project financials.

**Dashboard Centre** allows you to have a birds eye view of your project portfolio. Keeping you abreast of project completion, status budget and time.

**Timesheet Centre** allows for timesheet approvals and management.

**Resource Management Centre** provides information about utilisation of resources over all the projects they are assigned to. This information can then be used to re-allocate (level) the work to optimize the output of the whole resource pool.

**Company** enables the management of users, structures, billing codes, code sets and calendars.

**Client Centre** is a list of clients who have viewing rights of their current projects. Clients could be internal (e.g. Finance) or external (e.g. ABC Company).

**Administration Centre** enables the b-smart system administrator to configure application settings, licensing and logs.
